The Green Scene

Ask The Architect

Congratulations again to Architect Wilson, who recently became Gary Guy Wilson Architects' first LEED Accredited Professional™. The LEED AP program was established with the support of the U.S. Green Building Council, which recently published "45 Ways Of Getting Greener". Join the U.S. Green Building Council and Architect Wilson in getting greener with any or all of the ideas below.

Run The Numbers

Use the U.S. EPA's online emissions calculator to find out how many greenhouse gas emissions your household is responsible for. Spend 10 minutes entering your data, and you'll get a rough estimate of your total CO2 emissions, plus action steps to go on a carbon diet.

Be An Energy Star

Sometimes to save a lot, you have to spend a little. Energy Star-qualified appliances may cost a bit more than standard models, but they incorporate features like high-efficiency compressors and motors and better insulation. And they use 10% to 50% less energy and water, which means more money in your pocket year after year.

Got WaterSense?

If a family of four replaces their 3.5-gallon-per-flush toilets made before 1994 with a WaterSense-labeled toilet, they could save \$90 a year and as much as \$2,000 over the toilet's life.

Harvest The Sun

In regions with abundant sunshine and high energy costs, solar systems are gaining ground. Solar electric systems can offset some or all of your home's electricity use, while solar water-heating systems can heat water for sinks, showers, laundry, home heating, pools and spas. A variety of federal, state and local incentives are making renewable-energy systems more affordable. For a directory of incentives by state, go to dsireusa.org.

BOY SCOUTS OF AMERICA
100 YEARS OF SCOUTING

SPOTLIGHT *Year In Review*

It has been a banner year for Gary Guy Wilson Architects! In addition to the company's involvement in golf tournaments throughout the year, the firm has developed new projects in both the private and the public sector.

2008 SPECIAL EVENTS
